

# CSCE 590-1: From Data to Decisions with Open Data: A Practical Introduction to AI

## Lecture 4: A Systematic AI Approach – AI For Water

---

PROF. BIPLAV SRIVASTAVA, AI INSTITUTE

21<sup>ST</sup> JAN 2021

*Carolinian Creed: “I will practice personal and academic integrity.”*

# Organization of Lecture 4

---

- Introduction Segment
  - Recap of Lecture 3
- Main Segment
  - Real-World Problems – Water
  - A Systematic Approach
    - Value of decision: before and after
    - Data-needed
    - Method
    - Evaluation
    - Integrating with overall process
- Concluding Segment
  - About Next Lecture – Lecture 5
  - Ask me anything

# Introduction Segment

---

# Recap of Lecture 3

---

- We looked at problems of the real world
- Understood what is meant by “Smart City”. Also referred to as “Cyber-Physical System”.
- Introduced a systematic framework to introduce data-driven innovations
- Looked at examples in Health
  - Saw examples of AI methods: decision making, randomized control trial (synthetic control)

# Main Segment

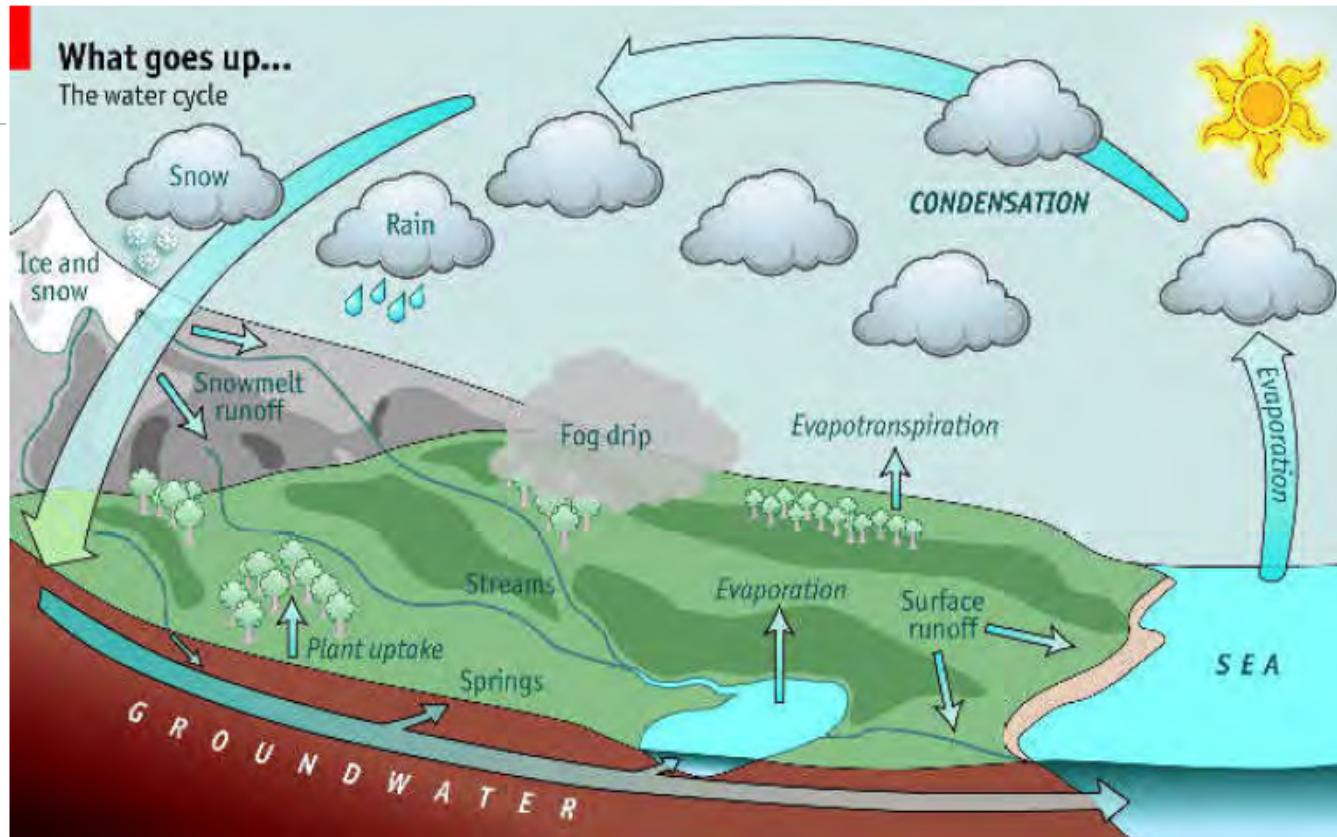

---

Blue Water project: <https://sites.google.com/site/biplavsrivastava/research-1/bluewater>

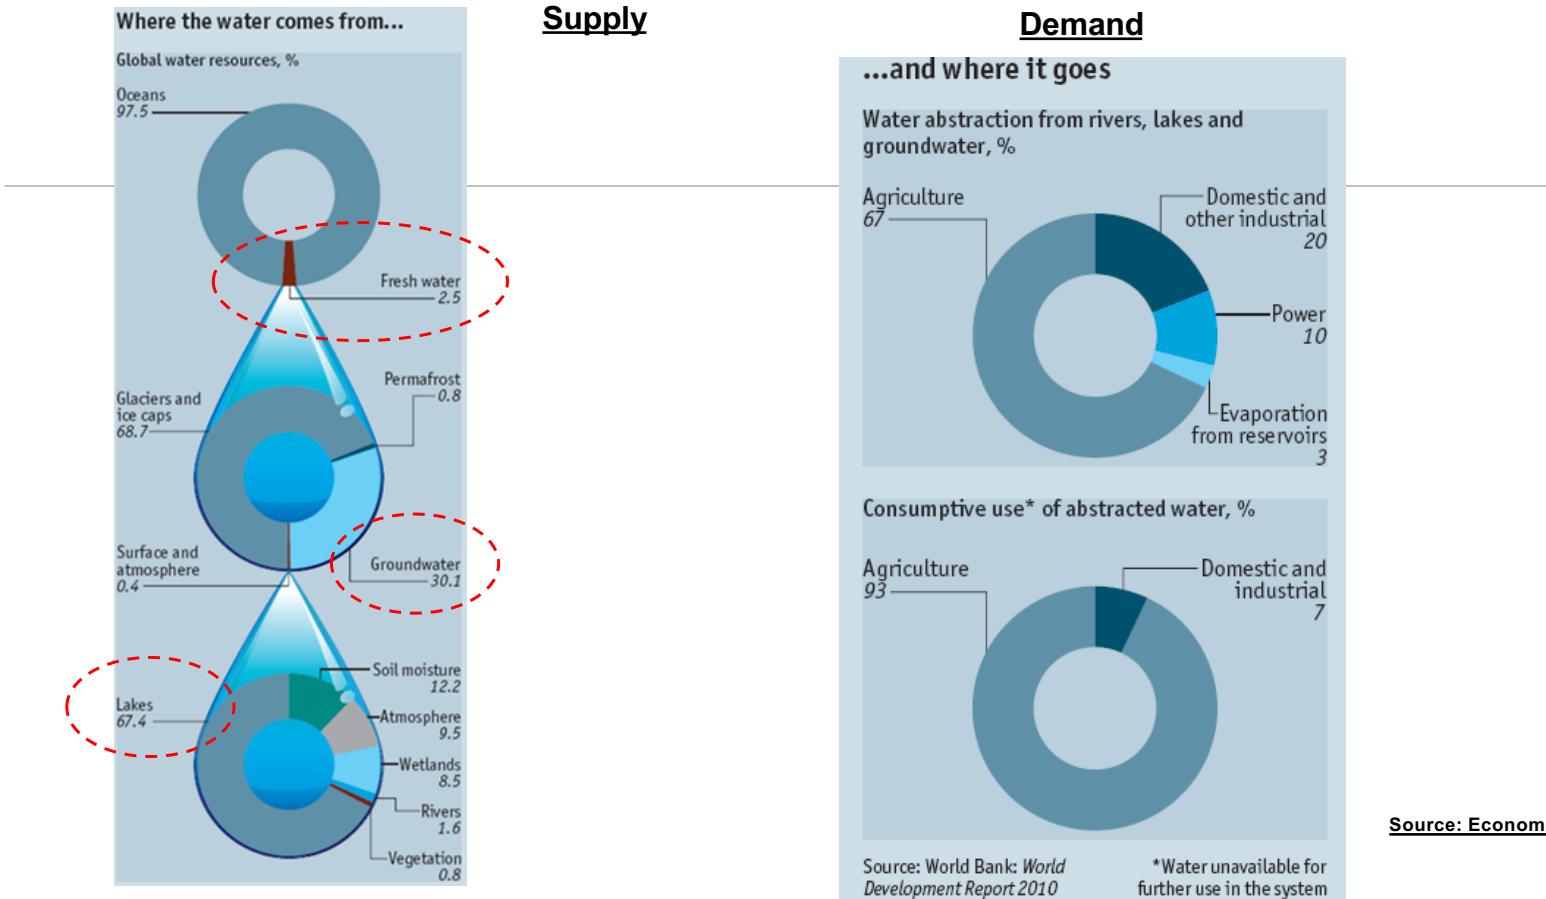

AAAI 2017 Tutorial: <https://sites.google.com/site/aiwatertutorial/>

# Water Cycle (aka Hydrological Cycle)

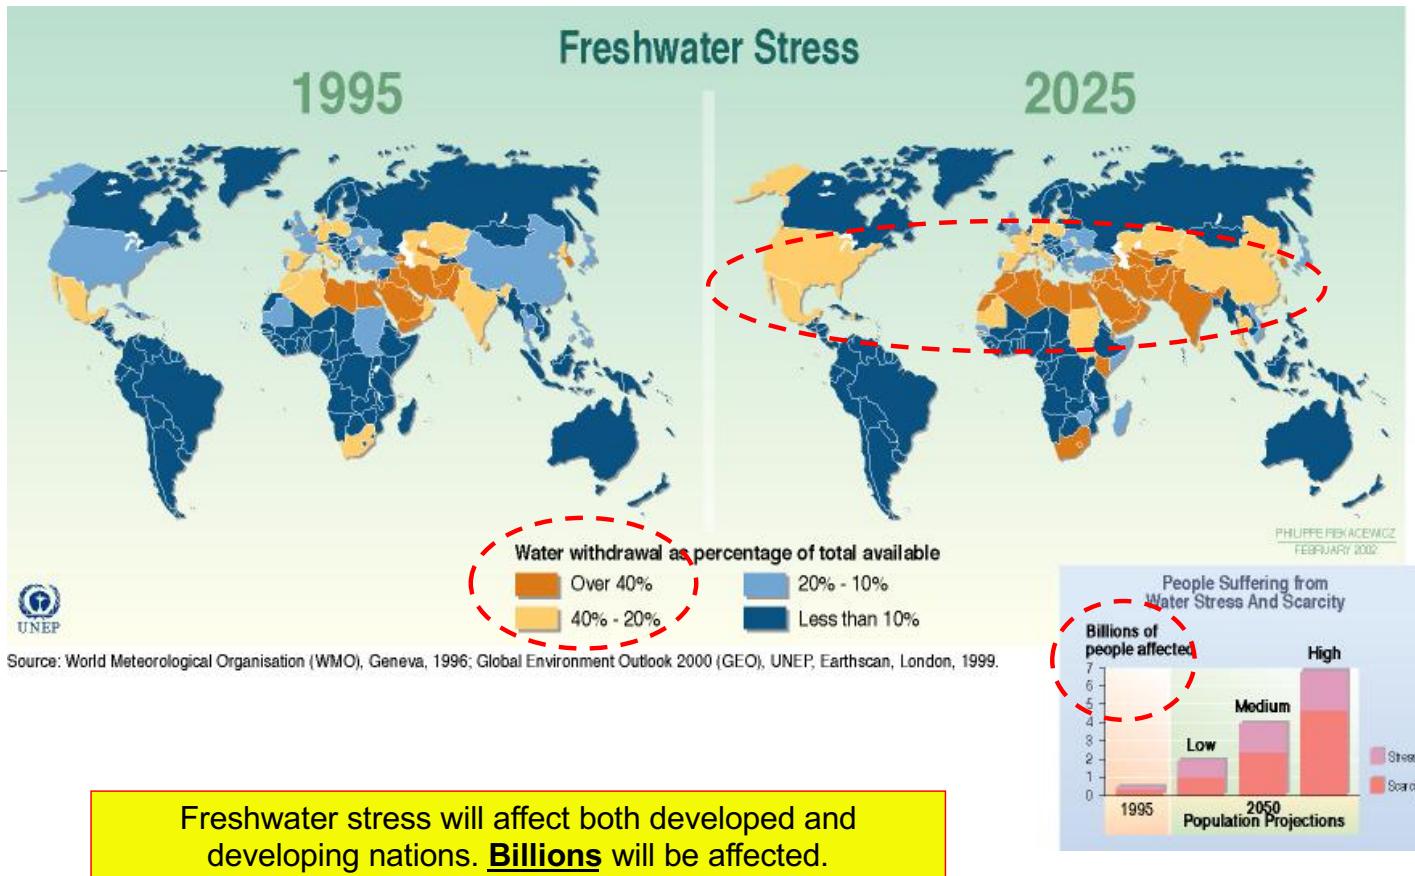

Source: Economist, May 20, 2010

# Fresh Water: Supply and Demand

# Fresh Water Stress: Spatial Distribution

# Better information flow is critical for better water flow

*The nature of water management must rapidly evolve*

<i>From</i>	<i>To</i>
<b>Manual Data Collection</b>	<b>Automated Sensing</b>
<b>Managing in Isolation</b>	<b>Managing Collaboratively</b>
<b>Intermittent Measurement</b>	<b>Real-Time Measurement</b>
<b>Multiple Data Sets</b>	<b>Data Integration</b>
<b>“Guesstimation” Tools</b>	
<b>Commodity Pricing</b>	<b>Modeled Decision Support</b>
<b>Tactical Problem Solving</b>	<b>Value Pricing</b>
	<b>Strategic Risk Management</b>

*“One barrier to better management of water resources is simply lack of data — where the water is, where it's going, how much is being used and for what purposes, how much might be saved by doing things differently. In this way, the water problem is largely an information problem. The information we can assemble has a huge bearing on how we cope with a world at peak water.”*

Source: Wired Magazine, “Peak Water: Aquifers and Rivers Are Running Dry. How Three Regions Are Coping”, Matthew Power, April 21st, 2008

# Challenges and Need for AI

---

## Challenges

- Increasing demand due to
  - Population
  - Changing water-intensive lifestyle
  - Industrial growth
- Shrinking supplies
  - Erratic rains due to climate change
  - Sewage / effluent increase
- Poor management
  - Below cost, unsustainable, pricing
  - Delayed or neglected maintenance

*Water is the next flash point for wars*

## Value of Water Pollution Data

- Government for business decisions
  - Source attribution
  - Sewage treatment
  - Public Health
- Individuals for personal decisions
  - Bathing (Religious, Lifestyle)
  - Recreation
  - Community practices
- Businesses
  - Inland transportation
  - Water usage and treatment options

# Water Information to People: Static and Post-Facto Advisories (US)

The screenshot shows a web browser window for the EPA website at <https://www.epa.gov/flint/advice-flint-residents>. The page title is "Advice to Flint Residents". The main content area contains several sections: "Important Resources" (with links to water testing and filters), "Questions about safe water" (with an email address and phone number), and a large box of "DO NOT" and "DO" instructions. The "DO NOT" section includes: "DO NOT drink unfiltered water. It's not safe!", "DO NOT cook or brush teeth with unfiltered water", "DO NOT allow babies and children to drink bathwater", and "DO USE an NSF-certified water filter rated to remove lead". The "DO" section includes: "DO RUN cold water throughout the house up to 5 minutes every morning to flush pipes" and "EVERYONE CAN wash hands, bathe, or shower with unfiltered water". The top navigation bar includes links for Environmental Topics, Laws & Regulations, About EPA, and a search bar.

Advisories to public for Flint Residents, MI, USA

Physical signage at a lake in Washington, USA

## Problem and Objective

Guide every day people, who may be non-experts, with a multi-modal assistant to take data-based decisions specific to their needs, leveraging complex water quality data.

### Audience

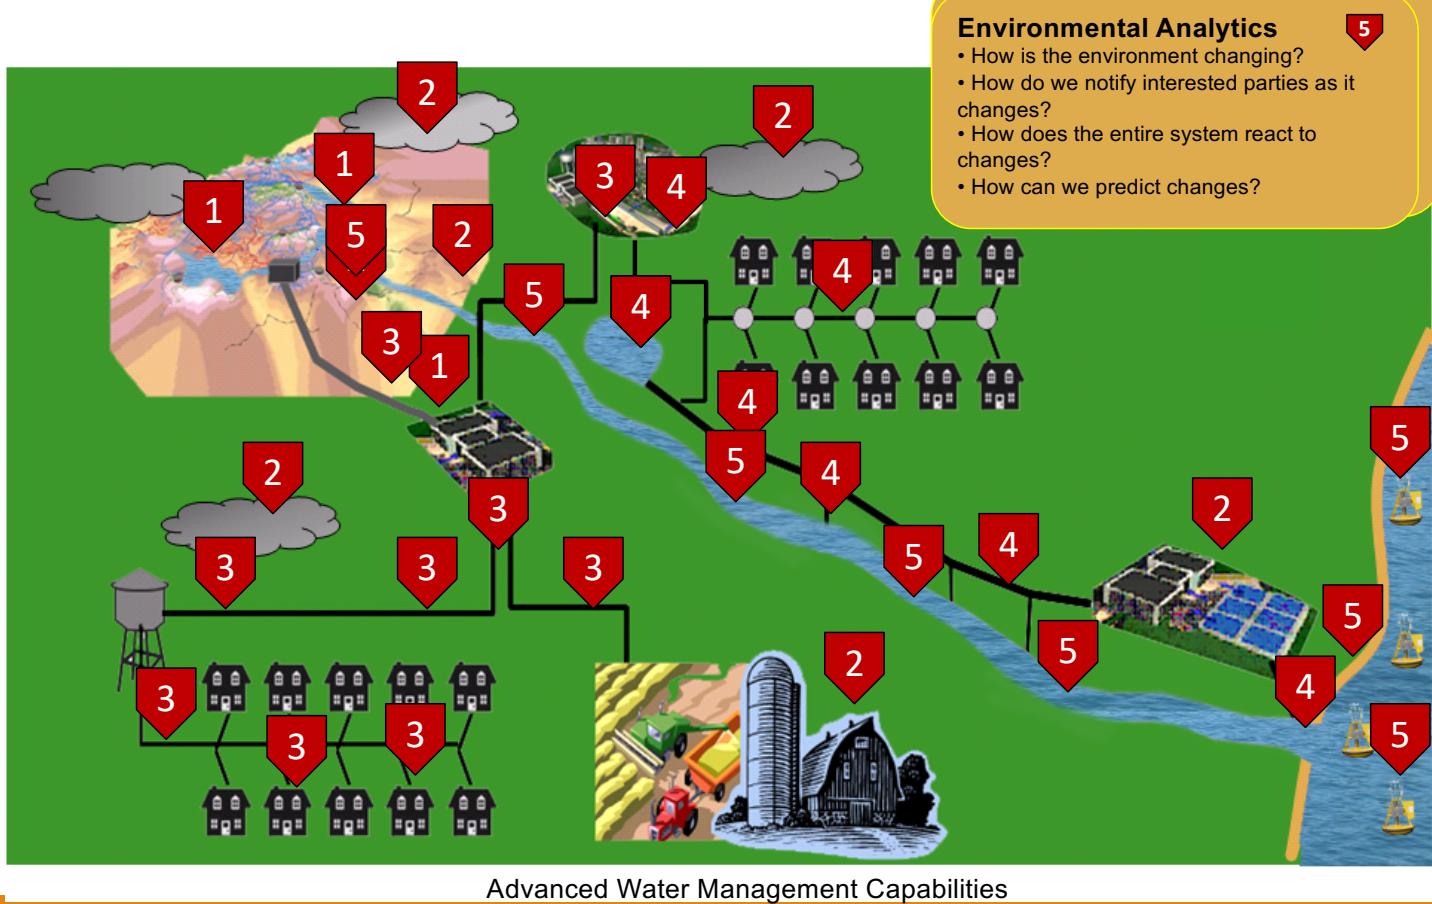

- General Public that wants to understand water quality at a specific location (e.g., swimming)
- Professionals with responsibility for regions (e.g., public health)

### Before and After

**Now:** Static, non-interactive, non-contextual, lacks data details

**Future:** Anywhere, interactive, explain with data, contextual

## Analytics Within Water Life Cycle

# Exercise: Water Problems in South Carolina

---

- Problems
  - Whether SC specific?
- What people are doing today?
- Data

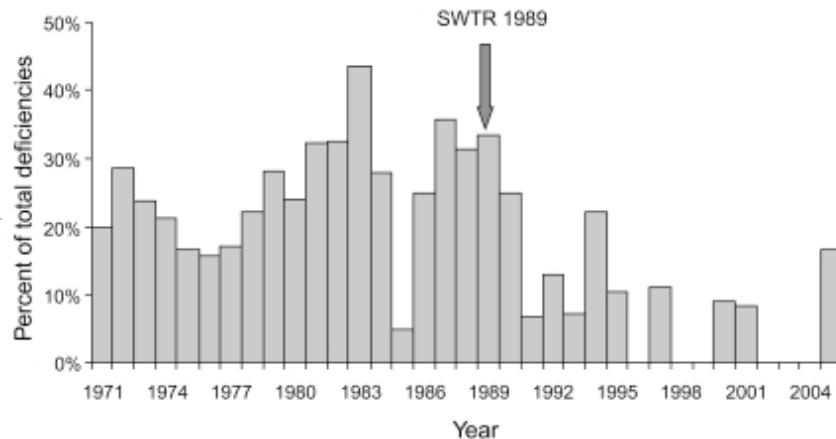

## Case Study: Advice to People in US

---

## USA: Water Safety Rules and Monitoring Reduce Water-Borne Diseases

Number of reported waterborne-disease outbreaks in public drinking water systems—United States, 1971–2006 (N = 680).

SOURCE: CDC, unpublished WBDOSS data.

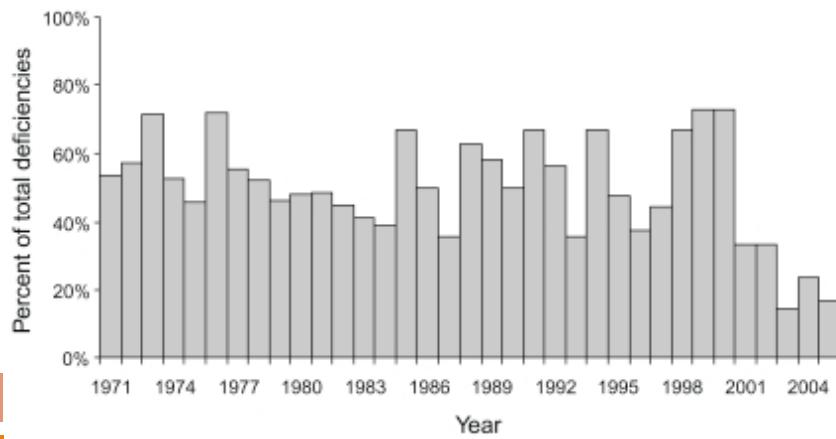

Proportion of deficiencies in public drinking water systems associated with untreated or improperly treated ground water—United States, 1971–2006.

Deficiency = antecedent event or situation that results in exposure of persons to a disease-causing agent or agents. May be single or multiple deficiencies associated with each outbreak.

SOURCE: CDC, unpublished WBDOSS data.

**SWTR: Surface Water Treatment rule of 1989**

# US Geological Survey's Water Data

- Web interface :

<https://waterdata.usgs.gov/nwis>

- REST interface:

<https://waterservices.usgs.gov/rest/DV-Service.html>

- Snapshot:

<https://waterdata.usgs.gov/nwis/current/?type=quality>

The screenshot shows a web browser displaying the US Geological Survey's Water Data website. The URL in the address bar is https://waterdata.usgs.gov/nwis/current/?type=quality. A message at the top indicates that the user is using a mobile device and provides a link to the mobile site. Below this, there are news bulletins and a link to introduce the next generation of USGS Water Data for the Nation. The main content area is titled "Current Conditions for the Nation -- Water Quality -- 2242 site(s) found" and includes a "PROVISIONAL DATA SUBJECT TO REVISION" note. The data is presented in a table with columns for Station Number, Station name, Specific conductance, Temperature, Dissolved oxygen, pH, water, and Date/Time. The table lists numerous sites across Alabama, including the Chattahoochee River, Coosa River, Tuckabatchee Creek, Kelly Creek, Yellowleaf Creek, Tallapoosa River, and Little Cahaba River, among others.

Station Number	Station name	Specific conductance uS/cm @ 25 degC	Temperature, watr unf deg C	Dissolved oxygen, mg/L	pH, water, unfiltrd units	Date/Time
023432415	CHATTahoochee R .36 MI DS WFG DAM NR FT GAINES, GA	79	10.2	12.4	--	01/17 13:00 EST

## Creek Watch – Crowd Sourced Water Information Collection

creekwatch.researchlabs.ibm.com As on 14 Oct 2014

### Creek Watch Explore your watershed

<enter an address or geo location to zoom to> Go there! Showing data from: All time Map Satellite

Creek Watch is an iPhone application that enables you to help monitor the health of your local watershed. Whenever you pass by a waterway, spend a few seconds using the Creek Watch application to snap a picture and report how much water and trash you see. We aggregate the data and share it with water control boards to help them track pollution and manage water resources. You can use the map on the left to explore the data that people have contributed, or see recent contributions as a [table](#).

The Creek Watch App uses four pieces of data:

1. The amount of water: empty, some, or full.
2. The rate of flow: still, moving slowly, or moving fast.
3. The amount of trash: none, some (a few pieces), or a lot (10 or more pieces).
4. A picture of the waterway.

This data helps watershed groups, agencies and scientists track pollution, manage water resources, and plan environmental programs.

Creek Watch is a project developed at IBM Research - Almaden in consultation with the California State Water Resources Control Board's Clean Water Team.

# Water Advice Via Conversation Interfaces

•Video:

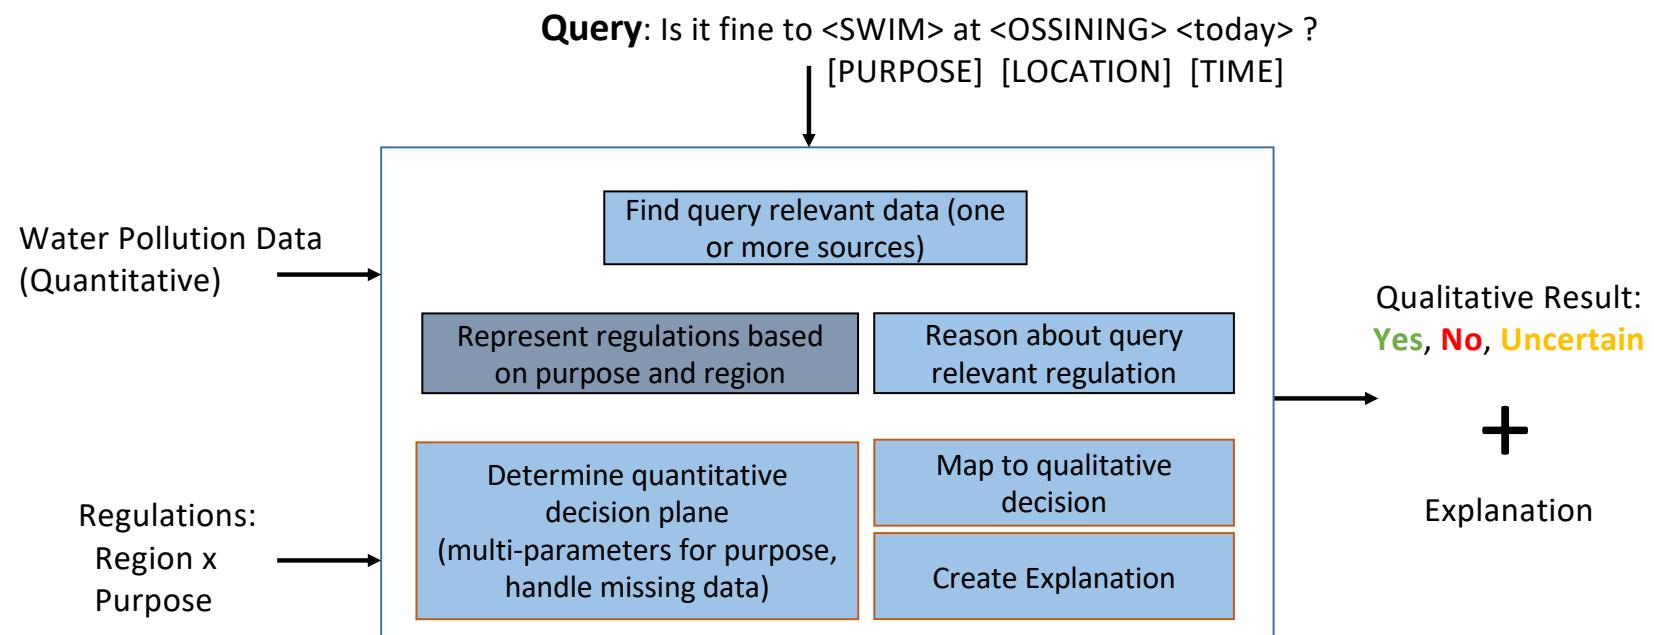

<https://www.youtube.com/watch?v=z4x44sxC3zA>

•Paper: Jason Ellis, Biplav Srivastava, Rachel Bellamy and Andy Aaron, Water Advisor - A Data-Driven, Multi-Modal, Contextual Assistant to Help with Water Usage Decisions, AAAI 2018.  
[Demonstration paper].

Modes (R to L):

1. Conversation
2. Map
3. Documents

# Architecture

## Data, Analysis and (AI) Challenges

### Data Needed

- Mapping of activities (e.g., bathing, drinking, fishing) to water quality parameters
  - Created and made open-source at: <https://github.com/biplav-s/water-info>
  - Novelty: None existed before
- Regulations applicable to geography and activity, plus water quality parameters
  - Demo: US EPA, Michigan, New York, India
  - Challenge: under-specified, conflicting
- Actual water quality data
  - Demo: US Geological Survey (USGS)

### AI Methods

- Constraints, Rule-based processing, Preferences, Knowledge Graph

# Sample Standards: Just in Drinking Water

Source: [https://en.wikipedia.org/wiki/Drinking\\_water\\_quality\\_standards](https://en.wikipedia.org/wiki/Drinking_water_quality_standards)

## Water Data from USGS

The screenshot shows the USGS Water Data from USGS website. At the top, there's a banner with the USGS logo and science for a changing world. Below it, a header bar includes a search field, a 'National Water Information System: Web Interface' title, and navigation links for 'USGS Home', 'Contact USGS', and 'Search USGS'. A main content area displays a collage of water-related images. Below the collage, there's a section for 'News Bulletins' with a link to 'Full News'. The main content area is titled 'Current Conditions for the Nation -- Water Quality -- 2023 site(s) found' and includes a 'PROVISIONAL DATA SUBJECT TO REVISION' note. It features a table with columns for 'Station Number', 'Station name', 'Specfic', 'ic', 'pH', 'water', 'conductance', 'Temperature', 'Dis', 'unfitr', 'wat unf', 'ature', 'solved', 'field', 'uS/cm @ water', 'oxygen', 'std', 'Date/Time', and 'units'. The table lists data for three stations in Alabama.

Station Number	Station name	Specfic	ic	pH	water	conductance	Temperature	Dis	unfitr	wat unf	ature	solved	field	uS/cm @ water	oxygen	std	Date/Time	units
<a href="#">023432415</a>	CHATTahoochee R .36 MI DS WFG DAM NR FT GAINES, GA	--	9.3	--	--	02/01 16:30 EST												
<a href="#">02397530</a>	COOSA RIVER AT STATE LINE, AL/GA	118	--	11.3	--	02/01 16:00 EST												
<a href="#">02400100</a>	TERRAPIN CREEK AT ELLISVILLE AL	--	9.3	--	--	02/01 17:00 EST												
<a href="#">02400500</a>	KELLY CREEK NEAR VINCENT AL	--	--	--	--	02/01 16:00 CST												

## Mapping Made Available on Github

The screenshot shows a GitHub repository named 'biplav-s / water-info'. The repository page includes a header with 'Unwatch', 'Star 0', 'Fork 0', and a search bar. Below the header, there are tabs for 'Code', 'Issues 0', 'Pull requests 0', 'Projects 0', 'Wiki', 'Settings', and 'Insights'. A section titled 'Resources to analyze with water pollution data' contains a button to 'Add topics'. Below this, there are sections for 'Commits', 'Branches', 'Releases', and 'Contributors'. The 'Commits' section shows a commit from 'biplav Updated with Michigan limits and bug fixes' made 7 days ago. The 'Branches' section shows 'Branch: master' with a 'New pull request' button. The 'Releases' section shows 'Create new file', 'Upload files', 'Find file', and a 'Clone or download' button. The 'Contributors' section shows '0 contributors'. A detailed view of a commit is shown on the right, with a note about purposes and a notes section listing geoLimit and type details.

Purposes: Provide permissible limits for analyzing water quality. The information is taken from different standards, purporting to be applicable at specific locations, and for specific purposes. An application may use information from the given context or out-of-context, if information for its purpose is missing, provided they suitably qualify the results.

Notes:

- geoLimit: uses international country code (2 digit), and also standard state codes where applicable
- type:
  - "accept\_range": acceptable range is given between min\_limit and max\_limit
  - "generic": no limits are known
  - "highAccept": higher value than min\_limit is better
  - "lowAccept": lower value than max\_limit is better

# Decision Example –River Water Pollution

Allahabad | Updated Time : 9/24/2015 8:00:00 AM

Temp 31.7 °C	pH 8 units	BOD <sub>5</sub> 2.52	COD <sub>5</sub> 8.9 mg/L	Cond 321	Cl 71.2	Turb 93.35	NO <sub>3</sub> 0.12	NH <sub>4</sub> N 0.36	TC 10.45
-----------------	---------------	--------------------------	------------------------------	-------------	------------	---------------	-------------------------	---------------------------	-------------

Copyright 2014, Central Pollution Control Board, New Delhi

Value – To individuals, businesses, government institutions

- **Individual Use Example** – Can I take a bath? Will it cause me dysentery?
- **Business Use Examples** – How should govt spend money on sewage treatment for maximum disease reduction? If an industry is being set-up, which site is best among feasible alternatives with least impact and latest technology?

Data – Quantitative as well as qualitative

- Dissolved oxygen,
- pH,
- ... 30+ measurable quantities of interest

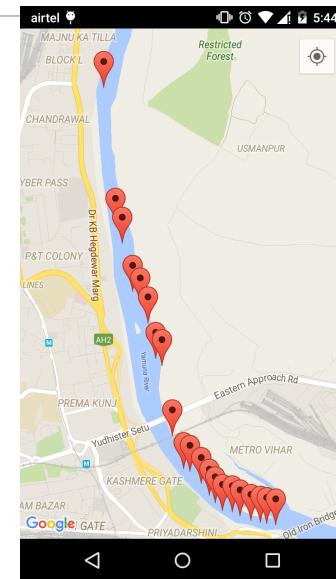

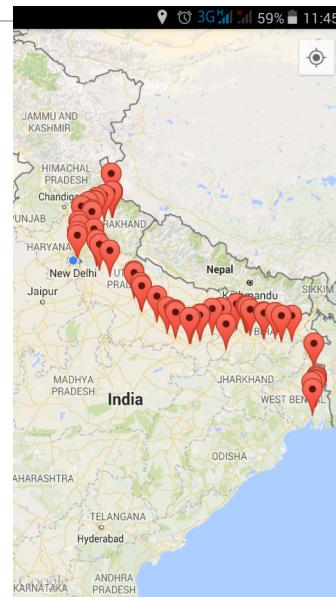

Access –

- Today, little, and that too in water technical jargon
- In pdf documents, website

**Key Idea:** Can we make insights available when needed and help people make better decisions?

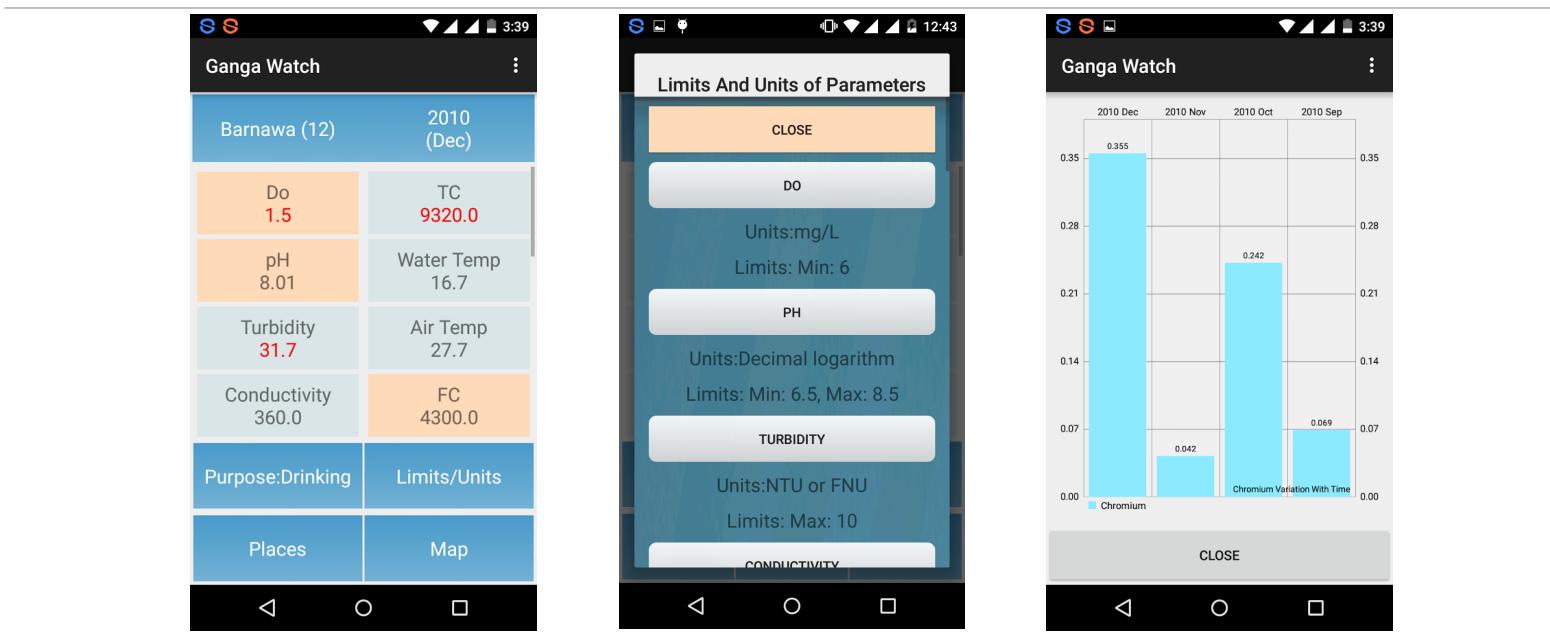

Download by searching for “GangaWatch” on Android Playstore in India.

## Haridwar Ardh Khumbh Mela 2016

- January 1, 2016 to April 30, 2016
- Over 100 millions attended; Many took dip in river at select spots
- Major bath sub-events during the period have high burst of visitors

## Question

- How much does human activity impact river?
- Where is the impact highest? Of what kind?

# Ardh Kumbh 2016, Haridwar

TABLE I WATER STANDARDS FOR DIFFERENT ACTIVITIES

Activity	pH	Conductivity ( $\mu\text{S}/\text{cm}$ )	DO (mg/L)	Turbidity (FNU)
Drinking	6.5-8.5	$\leq 2250$	$\geq 6$	1-5
Bathing	6.5-8.5	--	$\geq 5$	--
Irrigation	6.0-8.5	$\leq 2250$	$\geq 6$	1-5

Territorial Bird's Eye View: ~76 KM (Road Distance)

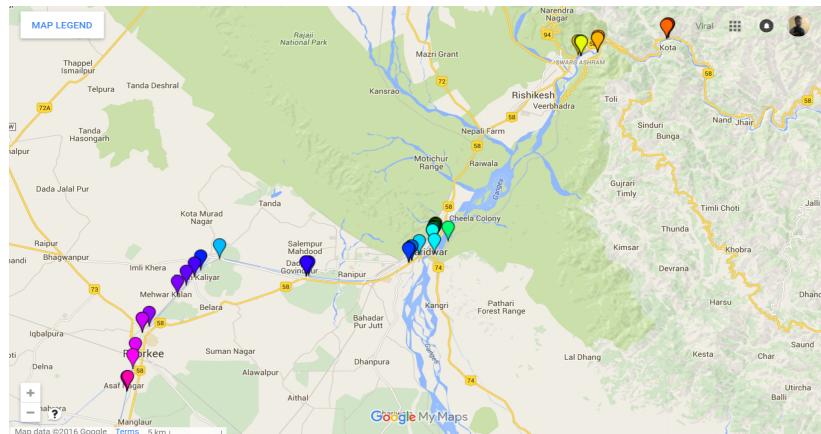

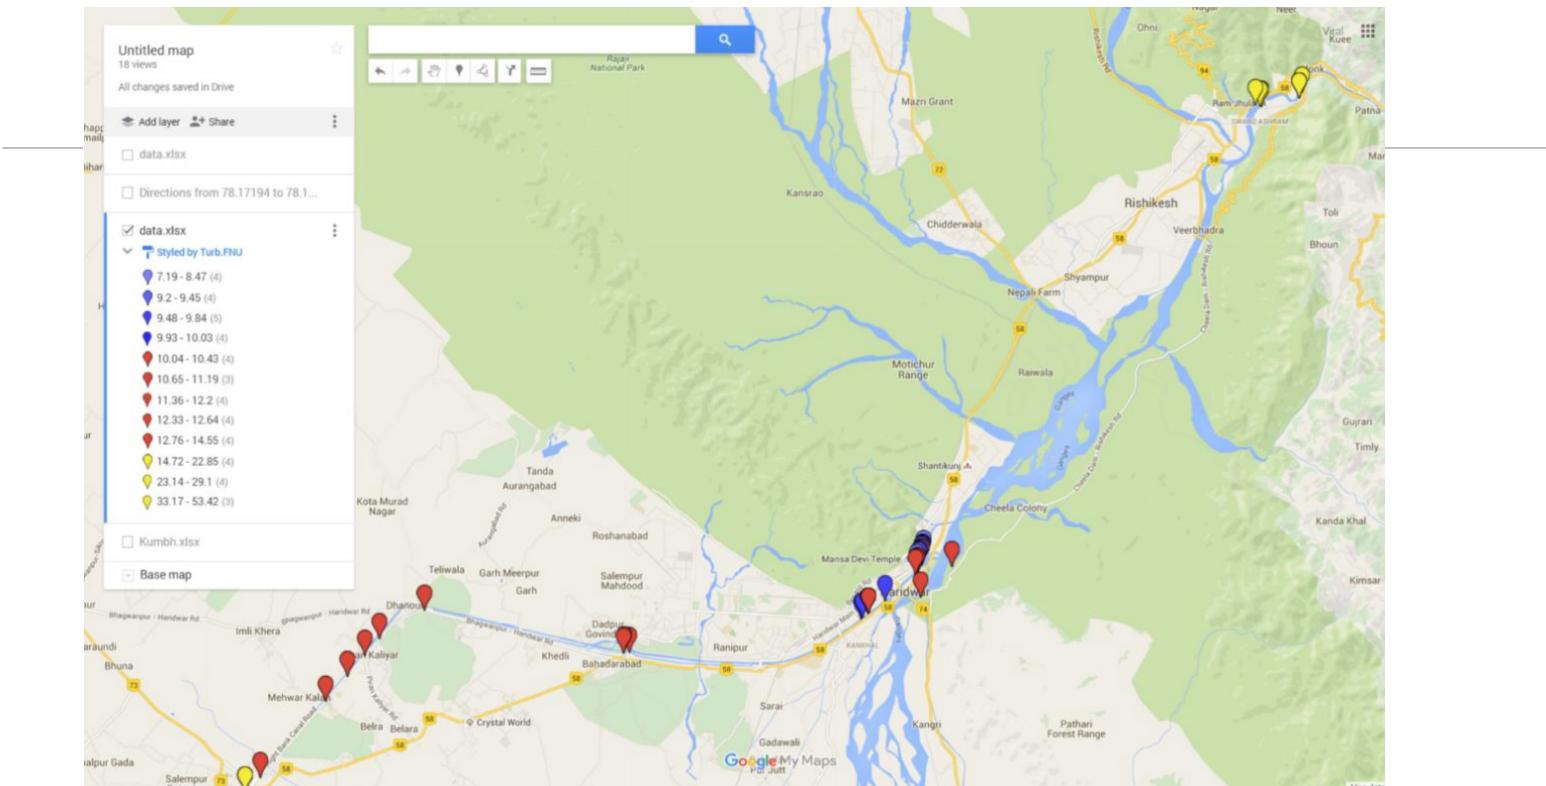

TABLE III DATA COLLECTION DATES

Date	Kumbh Bathing Day/ Other day	Place	Time
Feb. 27	Other day	Haridwar and Roorkee	3-7 PM
Feb. 28	Other day	Shivpuri, Rishikesh, Roorkee	11 AM - 6 PM
Mar. 07	Bathing Day	Haridwar	6-10 AM
Apr. 07	Bathing Day	Haridwar	1-4 PM
Apr. 15	Bathing Day	Haridwar	7-10 AM

# Turbidity Variations

Feb 27-28, 2016

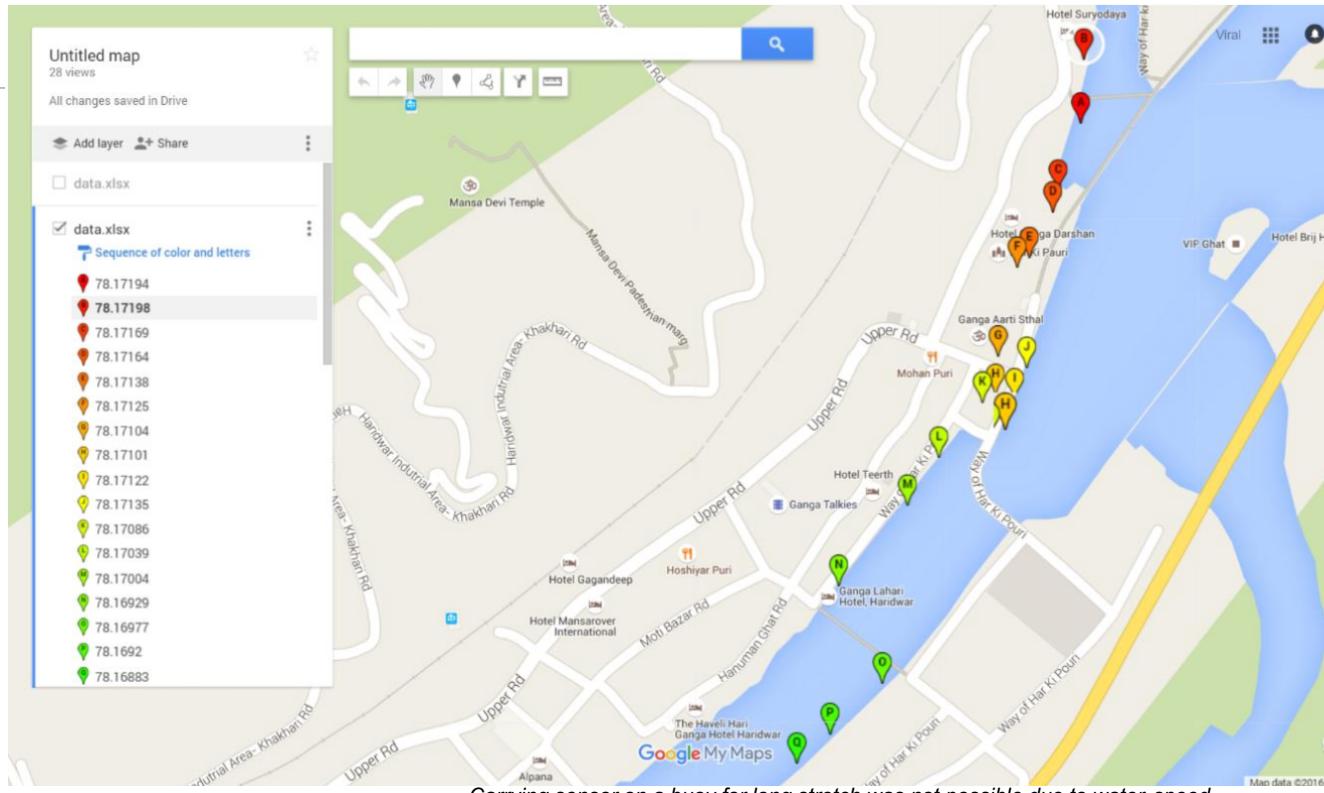

Turbidity values at different places (places marked red have turbidity value above the drinking range, places marked blues ha turbidity value in range of drinking water)

# Data Collection Points around Har-ki-pauri, Haridwar

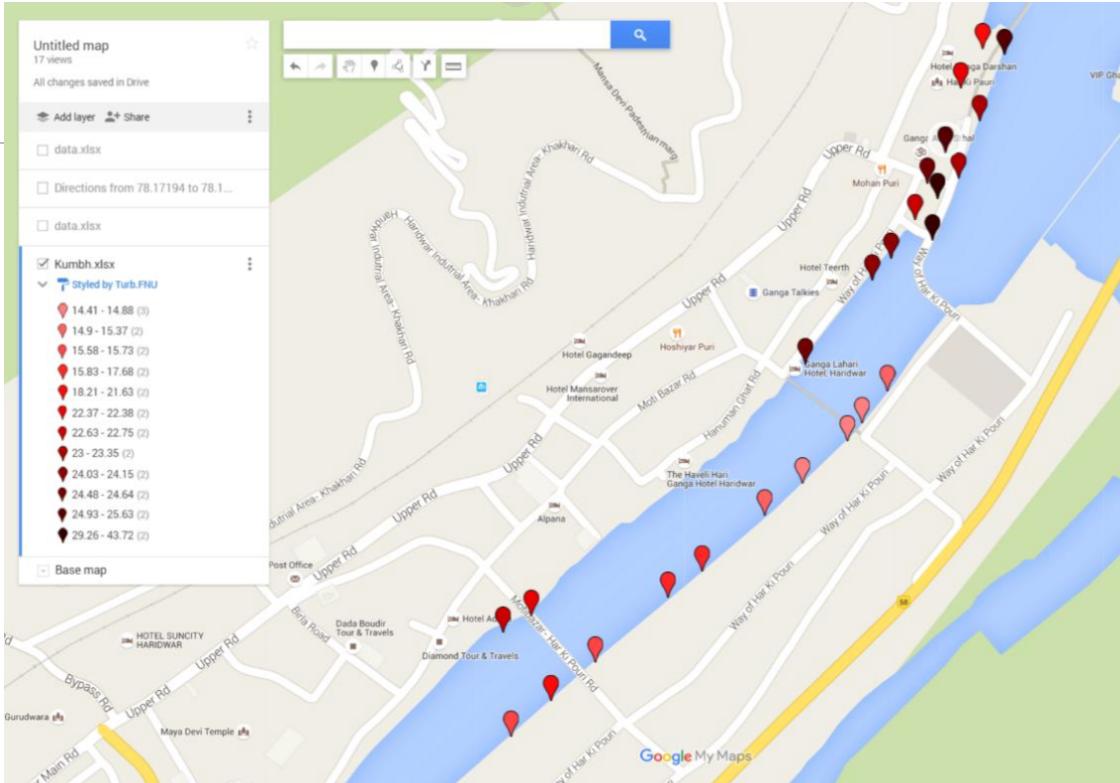

Feb 27-28, 2016

45+ places from Rishikesh to Ganga Canal (Roorkee) (75+ KM)

Carrying sensor on a buoy for long stretch was not possible due to water speed.

## Pollution on Major Bath Day around Har-ki-pauri, Haridwar March 7, 2016

Turbidity values at different places (places marked red have turbidity value above the drinking range, places marked blues ha turbidity value in range of drinking water)

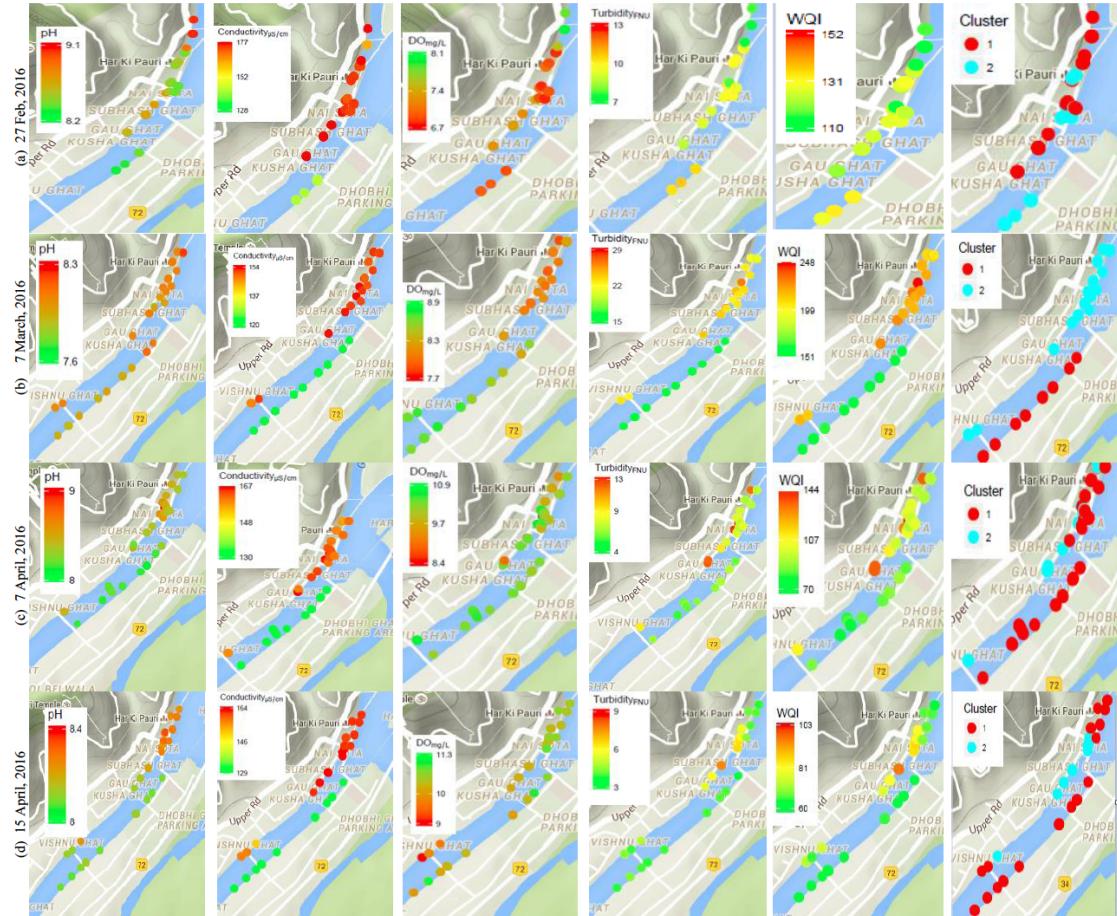

Figure 5 Heat Maps to Show Day-wise (a-d) variation of pH, Conductivity, DO, Turbidity, WQI, and Clusters during Ardh Kumbh 2016

# AI in the Scenario

---

Data cleaning, normalization, missing values

- Quantitative to qualitative data conversion
  - Water Quality Index
- Aggregate Binary Clustering using parameters with opposite polarities (e.g., Dissolved Oxygen, Turbidity), interval functions (e.g., pH)

Advanced

- Generating consolidated qualitative assessment across multiple parameters
- Explaining and validating assessment

# Analytics: Potential Use Cases

S. No.	Stakeholder	Use case	Data	Analytical techniques
1	IT	Identifying and removing outliers, data validation	Sensor data	Data mining (outlier detection)
2	Individual	Which bathing site to use?	Sensor data, ghat data	Rule-based decision support
3	Individual/ Economy	What crops can I grow that will flourish in available water?	Sensor data, crop data	Distributed data integration, co-relation
4	Institution	Determine trends/anomalies in pollution levels	Sensor data, weather data	Time series analysis, anomaly detection
5	Institution	Attribute source of pollution at a location	Sensor data, demographics, industry data	Physical modeling, inversion
6	Institution	Sewage treatment strategy and operational planning	Sensor data, demographics data, STP data	Multi-objective optimization
7	Institution	Promoting wildlife/ dolphins	Sensor data, wildlife data	Rule-based decision support

# Exercise: Discussion AI in Water Problems Identified in South Carolina

---

- Data
- AI techniques
  - Representation
  - Reasoning
  - Learning
  - Interaction with People

# Lecture 4: Concluding Comments

---

- We covered a background in water
  - Looked at common problems
- Looked at decision-support situations from US and a few solutions
- Looked at decision-support situations from India and a few solutions
- We explored the scope of AI

# Concluding Segment

---

# Think of Project and Act

---

- Look at problems of the real world around
- Identify
  - Value of decision: before and after
  - Data-needed
  - Method
  - Evaluation
  - Integrating with overall process
- Enter in student spreadsheet

# About Next Lecture – Lecture 4

---

# Lecture 4: Structured Data

---

- Data Preparation
- Knowledge Graph
  - Standardizing data
  - Annotating for discovery
